Cris Lawrence Lucero

Cebu, Philippines | +63 927 585 2893 | lucerocris22@gmail.com | crislucero.surgestudio.tech | github.com/lucerocris

SUMMARY

Full-stack developer who ships production software end to end, from schema and access control to the interface users touch, and automates the manual work around it. Built and launched **Nook**, a cafe-finder app live on the App Store.

EXPERIENCE

Software Engineer Intern
August 2026 – August 2027

Evo Tech Software Solutions Inc. — Cebu, Philippines (hybrid)

- Build automations that replace repetitive manual work for an e-commerce **operations team**: a **Python** and **Playwright** service that monitors client stores and flags every new, changed or resolved issue.
- Turn each issue into a **ready-to-work ticket** with suggested priority, likely cause, next steps and draft client messaging, so agents act on problems instead of hunting for them.

Platform Maintainer and Tech Lead
July 2026 – September 2026

PickleRank PH — Cebu, Philippines (part-time)

- Took over an inherited production **PHP / CodeIgniter 4** platform and maintained it alone: REST API, admin console and Expo mobile client, with **Redis**, **Pusher** realtime and AWS S3.
- Led the tech team on **tournament days**, running live event operations and fixing issues on the spot.

Independent Developer
June 2026 – Present

Self-employed: websites, software & automation — Cebu, Philippines

- Sole developer for a retail client's **Shopify storefront**, from scoping to deployment: rebuilt landing and product pages for conversion with custom sections and Liquid components on a **Dawn 15.5** theme.

Software Developer
October 2025

Pocket Concerts — Cebu, Philippines

- Only engineer on the concert **registration and check-in system** (**Next.js**, **Firebase**), which handled **600 registrants**, with an admin dashboard for the roster.
- Issued **QR-code tickets by email** on registration, and built the in-browser QR scanner staff used to verify attendees at the door.

PROJECTS

Nook — Cafe Finder, live on the App Store
Flutter · Next.js · Supabase

Founder and project lead — 3-person team, 2026 – present · github.com/nook-ph

- Led development of a **six-service product** and wrote most of the code: Flutter mobile app, public web app, internal admin console, cafe-owner portal, and a shared Supabase backend.
- Designed the data layer on **Postgres with Row-Level Security** as the authorization boundary.
- Built owner onboarding with **Mapbox** search and transactional email, then ran launch and outreach directly — **50 cafes listed** to date.

Bijou and Charms — Full-Stack Commerce Platform
Laravel · Next.js · Turborepo

Project lead, 4-person team — self-directed, July 2025 – February 2026

- Led a four-person team and **owned the frontend end to end**: a headless **Turborepo** storefront with a custom drag-and-drop charm configurator.
- Built the **Laravel 12** backend with the team: Sanctum auth, a **Filament** admin, queued jobs and **Pest** tests.

EDUCATION

University of San Carlos
2024 – 2028 (expected)

*BS Computer Science, 3rd year · **Dean's Lister**, first year (GWA 1.62; 1.0 is highest)*

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, PHP, Dart, Python, SQL
Frontend	Next.js (App Router), React, Flutter, Tailwind CSS, shadcn/ui, Liquid
Backend	Laravel 12, FastAPI, Node.js, CodeIgniter 4, Supabase (Postgres, RLS, Auth), Firebase, REST, Sanctum, JWT
Infra & Tools	Vercel, Docker, Turborepo, Filament, Pest, Redis, Pusher, AWS S3, Git, pnpm, Shopify CLI, Playwright, n8n
